Using this Environment Improvement Plan Template

This Environment Improvement Plan (EIP) template is to be used for all sources of non-potable water used on VicRoads construction and maintenance activities.

This document should only be prepared after reading the relevant sections of the VicRoads Integrated Water Management Guidelines and in accordance with the EPA Publication 464.2 – Guidelines for Environmental Management – Use of Reclaimed Water (2003).

Note that EIPs for the following non-potable water use proposals require approval and signoff from the Environment Protection Authority (EPA) or an appropriate appointed auditor:

- works and contracts requiring Class A non-potable water (the highest quality of non-potable water produced by a tertiary treatment process combined with pathogen removal), regardless of the volume (note that this EIP also requires Department of Human Services (DHS) endorsement)
- works and contracts requiring greater than 1ML/day of non-potable water
- works and contracts using non-potable water sourced from industrial processes
