

DoT ENGINEERING STANDARDS INDEX

IDX STD 0001

PURPOSE

This Index represents the "DoT Engineering Standards Baseline".

It identifies:

- 1) Each Engineering Standard owned and managed by DoT*.
- 2) The meta-information (Version, Publication Date, Status, Custodian) associated with each Standard.
- 3) DoT's legacy, archived and superseded standards.

It intended that this index:

- Be referenced into project documentation like Client Requirements Documents (CRDs),
- Be used to confirm the latest version of Standards
- Be used to access Standard meta-data (Custodian Information, Owner Information, etc.)

CONTENTS

This Index contains entries for the following types of engineering documentation:

- Standards
- Codes of Practice
- Test Methods
- Directives
- Bulletins
- Manuals
- Guides
- Notes

This Index also identifies:

- Legacy / Archived Standards

This Index does NOT (yet) identify:

- All Road Specifications
- All Standard, Typical or Component Drawings (for Road and particularly Rail)
- All Legacy, Archived, or Superseded Documents

This information will continue to be added to the index as it becomes available.

IMPORTANT NOTES

Note1: This index does not yet list drawings for the rail domain. Please visit DMS for access to the latest rail Standard, Typical and Component Drawings.

Note2: Non-ITS Specifications for the road domain are not yet listed in the index. Please refer to the 'Contract Specification' page on the VicRoads website.

Note3: This index does not yet list all Legacy, Archived or Superseded documents. Please contact the Standards Management Team for further information.
