

VicRoads Worksite Traffic Management Review Update

July 2016

Over the last 12 months VicRoads has undertaken a review of Worksite Traffic Management in conjunction with stakeholders and industry representatives. This review has consisted of a series of Industry workshops, stakeholder consultation and an online consultation hub.

Through this journey, VicRoads has received over 150 ideas and concepts on how to improve Worksite Traffic Management. These ideas and concepts have been incorporated under five focus areas, as shown in the figure below, and have been detailed in the VicRoads Action Plan.

In April 2016, VicRoads signed onto the Austroads key principles, agreeing to an 'In Principle' adoption of a nationally harmonised approach to Temporary Traffic control at Worksites. The agreed key principles are outlined in the figure below.

The Worksite Traffic Management Review Action Plan will consider both the Austroads Principles and the five focus areas covering the solutions/ideas from the workshops.

The next steps

Once the Action Plan has been approved, it will be put on the online consultation hub.

VicRoads will begin implementing some items from the action plan. VicRoads will also continue the discussion with Austroads and other States and Territories to work towards a nationally harmonised approach to traffic management.

The review will help raise both public and industry awareness of behaviours around worksites, with an aim to make effective and enduring improvements to safety around worksites in Victoria.
